

EasyTec – makes autumn easier

EasyTec is a simple and quickly assembled boat cover with low weight and with a lower price than a traditional boat cover.

EasyTec is based on a number of pipes in special composite which is assembled and inserted into a sewn channel in a tarpaulin. At the bow and stern on the boat, S-hooks are attached. When you mount the pipes with the tarpaulin and then to the S-hooks you get an arched cover, which is then easily secured sideways. The tarpaulin is then fastened around the boat with ropes. Extra support bars are included in case of extreme weather conditions.

EasyTec consists of 3-6 pieces of 2 meter custom made plastic pipes with solid sleeves, a white form fitting 240 gram tarpaulin and S hooks for attaching the position of the bow and stern. Also included are recommended number of support bars, knife and rope to secure the tarp.

The complete boat cover comes in a 2 meter long bag and a specially designed bag for the tarpaulin. EasyTec is available in five different sizes and is suitable for boats between 4-9 meters.

Advantages with EasyTec

- Low price, less than 40% the costs of traditional boat covers, and that even includes a quality tarp.
- Easy transport/handling, the longest section is 2 meters - fits even in the smallest car.
- Low weight, “soft” material - no metal pipe.
- Completely new design reduces the wind pressure.
- Quick assembly, no additional tools required.
