

Instruction for Extension of S-hook - when there is need for a longer S-hook

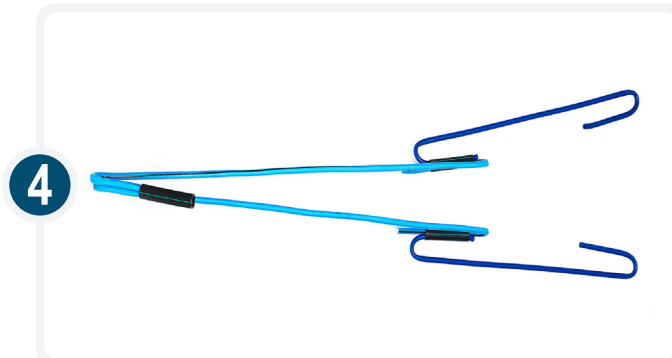

The extension set (S-splice) contains two hooks and two pipes (coupling tubes)

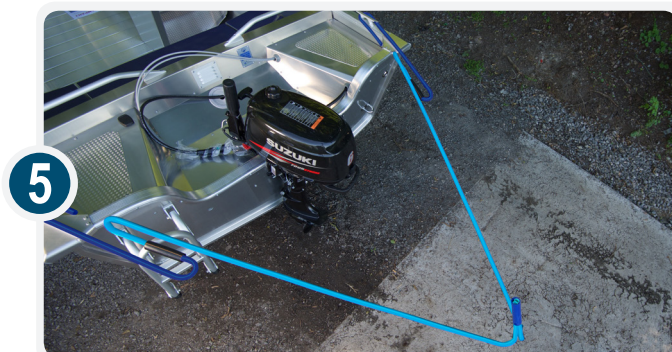

The pipe is connecting the S-hook with the short end of the S-splice.

The S-hook connected with the S-splice.

Do the same with the other side of the S-hook.

The extended S-hook is normally used to come around a large outboard engine.

Product part colors may differ compared to the pictures.
